Dear Ms. Rich:

Environmental Health conducted an inspection of the Onsite Sewage Treatment and Disposal System (OSTDS) at the above referenced location on August 3, 2011. The condition(s) stated below outline the department's assessment of the OSTDS:

**Status of Property:**

The premise was vacant at the time of our inspection and no overflows were observed. Because there were no occupants living in the residence, no sewage flow was being generated; therefore, our ability to fully assess the functionality of the system was limited.

**Septic Tank Compartment:**

The condition of the internal structure of the tank compartment could not be determined because the tank was not opened for a visual inspection. However, a limited external inspection of the tank was conducted.

- No structural deficiencies were noted.

**Drainfield System:**

The drainfield system was probed and the soil adjacent to the drainfield was augured to assess the system's functionality.

- The drainfield was found to be constructed of cradle drain and gravel material, which indicates that the system may be at least 25 years old.
- A sewage flow has not been generated for some time; therefore, the functionality of the system could not be determined. No structural deficiencies were apparent at the time of our inspection.

**Public water line setback (from water meter):**

The public water line was found to cross the septic system, which does not meet the legal setback established in the Florida Administrative Code 64E-8. This is for informational purposes at this time; however, if a failure occurs to the system in the future, a repair permit will not be issued unless the water line is modified to meet the proper setback. In this case, the public water line must be relocated two feet from the system and comprised of at least schedule 40 PVC or sleeved with similar pipe. A 10 foot setback is suggested whenever possible. If a 10 foot setback to the OSTDS can be achieved, it is not necessary to sleeve the water line.
